

Installation instructions

Flashing 1KS2600F B + 1KS2600F R
Flashing 1KS2100F B + 1KS2100F R

27.04.05 + 27.04.06
27.04.03 + 27.04.04

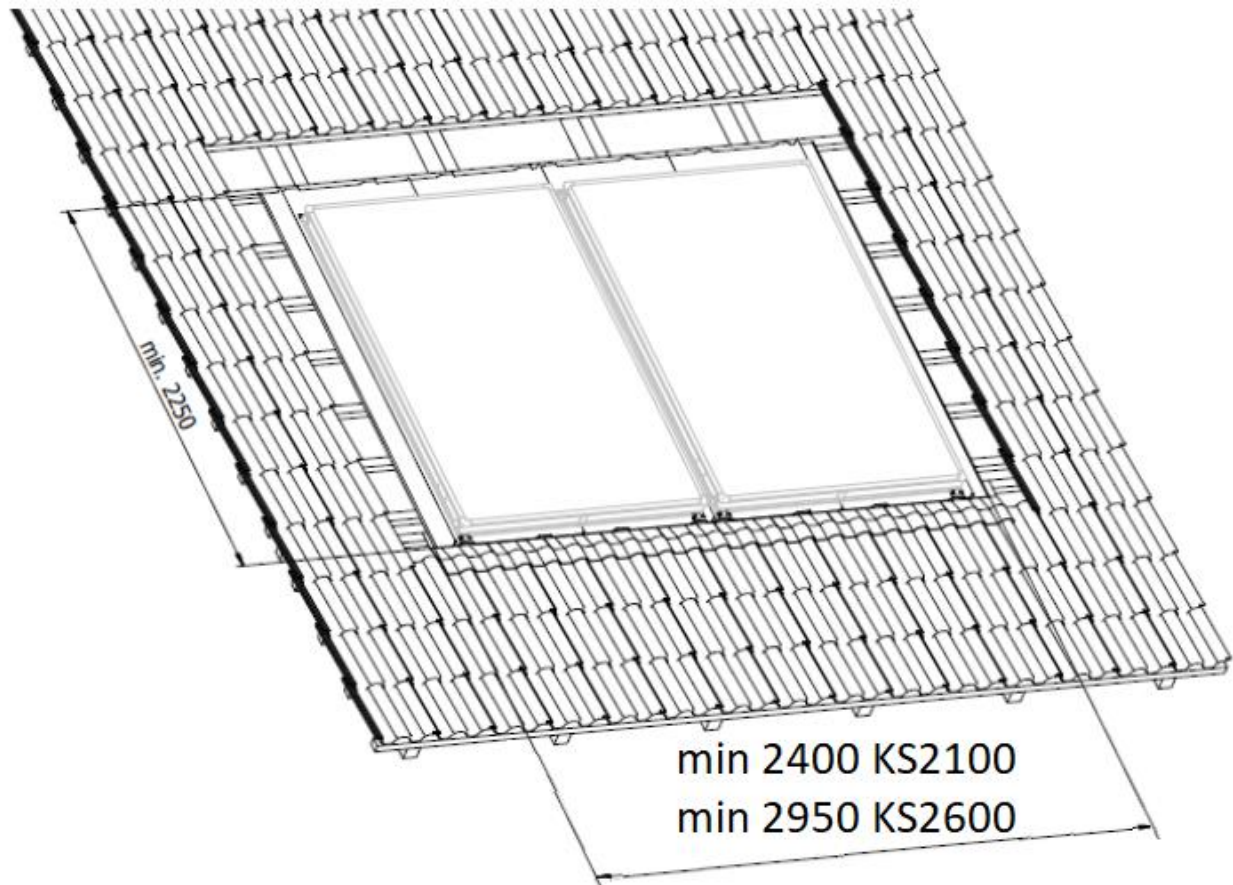

Components included

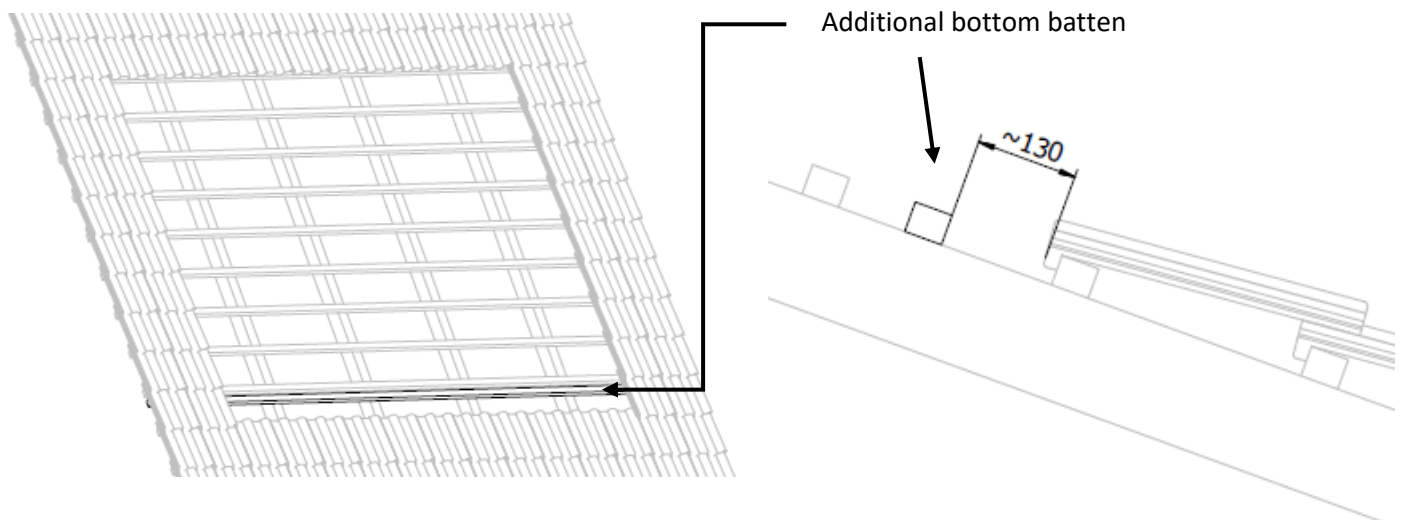

Note: The kit does not include additional battens or fastening and supporting strips for the upper tiles, as the required quantity of these components may vary with the spacing of battens and the width and covering length of the tiles. To select the correct quantities of additional materials, read these instructions before proceeding with installation.

Determination of the hole size in the roof skin

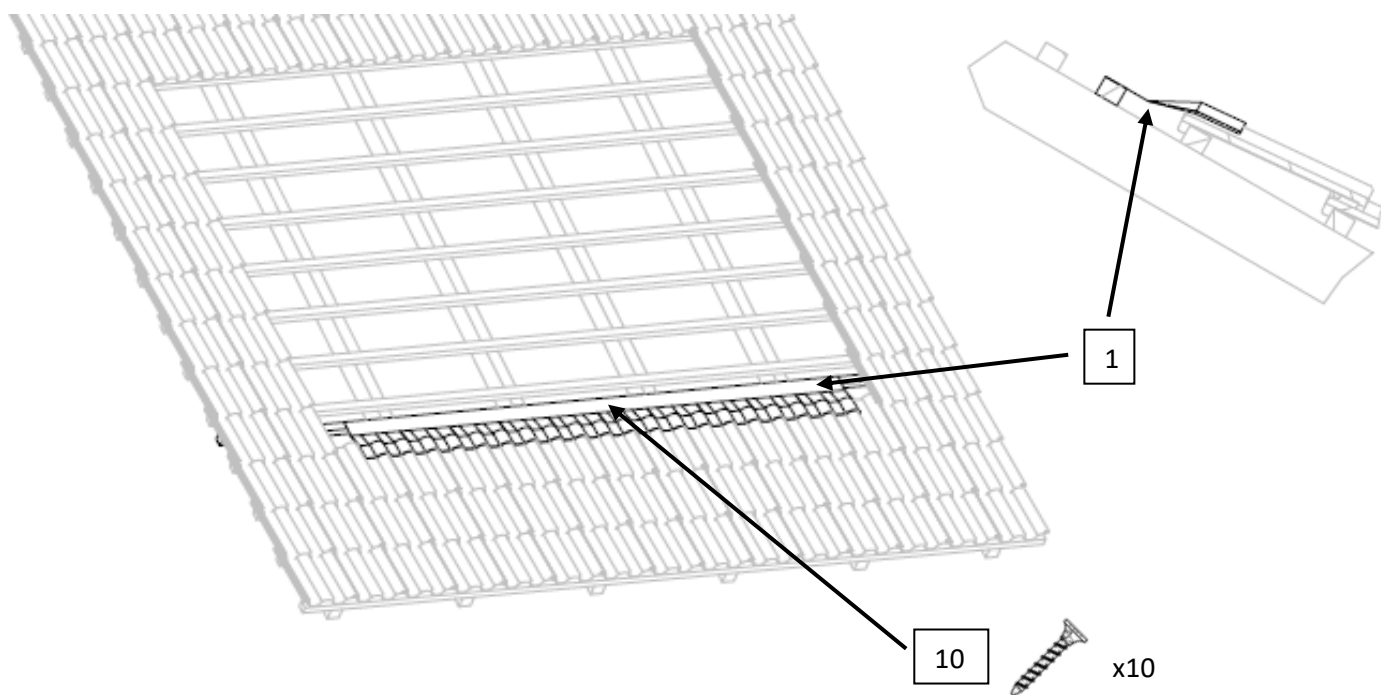

Installation of hardware parts

1. Installation of additional battens

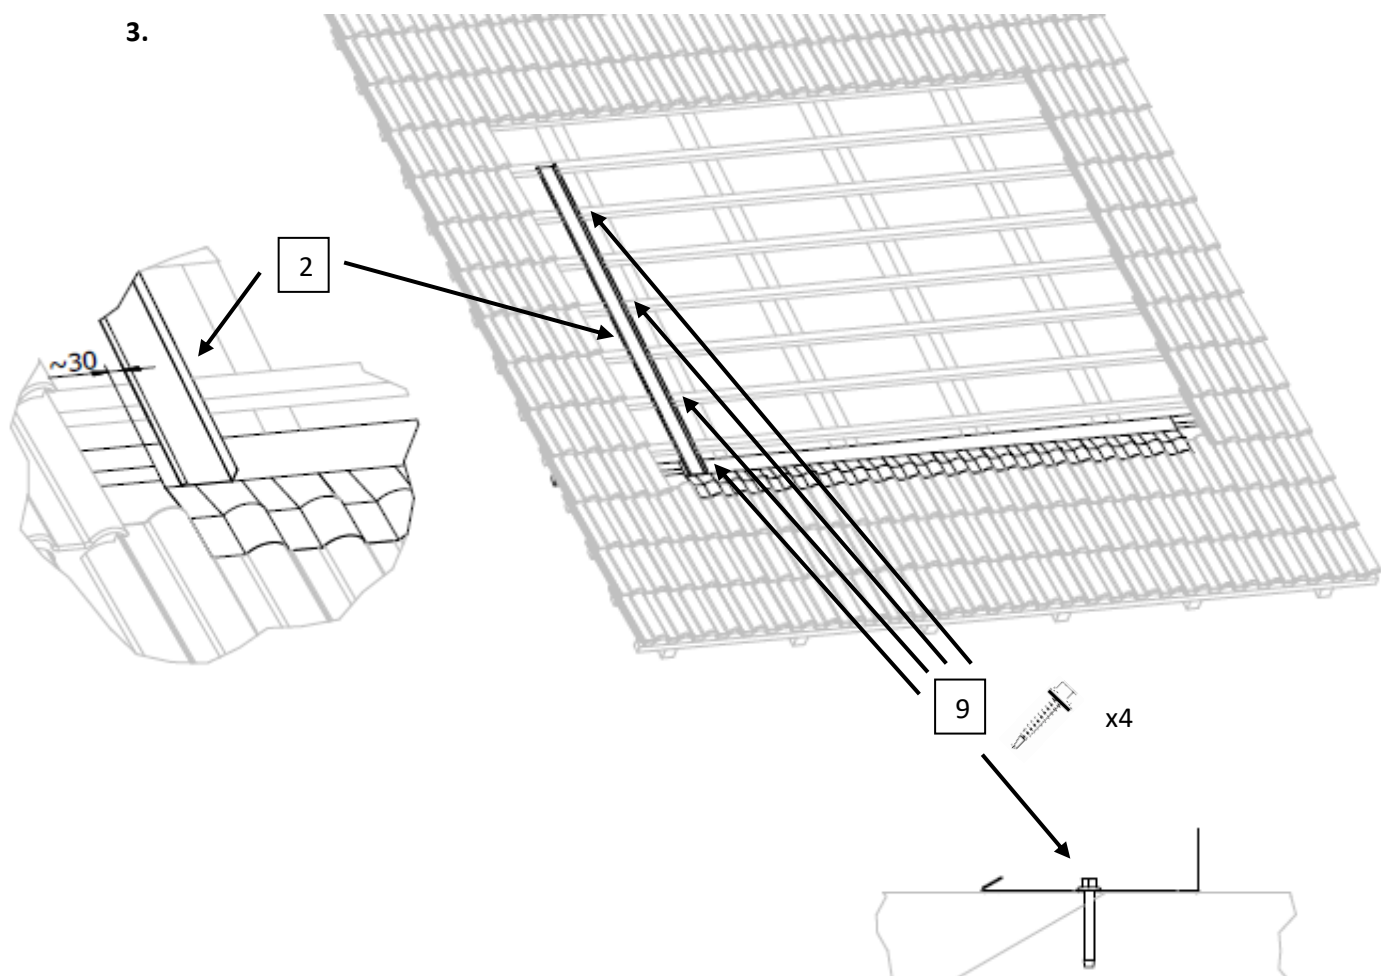

Note: The length of additional battens should be specified according to the number of solar collector panels in the array.

Notes:

- Carry out the installation with due care for proper workmanship, in compliance with the prevailing reference standards and the technical know-how, and with respect to the safety requirements.
- Complete the installation by following the figures above.
- The installer is responsible for assessing the strength of the structure and components and fastening of the product to the substructure.
- Check and tighten all bolted connections.
- It is recommended to periodically re-inspect the fasteners.
